May 17, 2010

Dear Colleague:

We are pleased to release the 2009 Sexually Transmitted Disease (STD) *Clinic Morbidity Report for Los Angeles County*. This report summarizes Chlamydia, Gonorrhea, early Syphilis, HIV and Herpes testing and morbidity from Los Angeles County Department of Public Health's twelve STD clinics: Antelope Valley, Simms Mann Health & Wellness Center (formerly Yvonne Burke), Central, Hollywood-Wilshire, Monrovia, North Hollywood, Pomona, South, Ruth Temple, Torrance, Curtis Tucker, and Whittier Health Centers.

In 2009, these public health centers had over 45,000 STD related visits and tested over 29,000 patients for Chlamydia, gonorrhea, syphilis and/or HIV. Chlamydia was the most commonly diagnosed STD (11.3%), followed by gonorrhea (4.5%), HIV (0.8%) and early syphilis (0.6%).

The report presents the summary section for all health centers first, followed by sections of each of the twelve health centers. Other sections included in the report are: Chlamydia and gonorrhea testing and morbidity by anatomic site, HIV and STD co-diagnoses, and herpes simplex virus morbidity by gender.

We hope that this report serves as a resource in designing population-specific STD prevention and intervention programs for those seeking care at the Los Angeles County Department of Public Health STD clinics.

Sincerely,

Peter R. Kerndt, M.D., M.P.H.  
Director, Sexually Transmitted Disease Program

Deborah Davenport, R.N., P.H.N., M.S.  
Director, Community Health Services

Robert Kim-Farley, M.D., M.P.H.  
Director, Communicable Disease  
Control and Prevention

Jonathan E. Fielding, M.D., M.P.H.  
Director and Health Officer

# Los Angeles County Sexually Transmitted Diseases Clinic Morbidity Report, 2009

## EXECUTIVE SUMMARY

Sexually transmitted diseases (STDs) remain a major public health challenge in Los Angeles County. Approximately 50,000 new curable STDs (Chlamydia, gonorrhea, and syphilis) occur each year— almost 60% of them among young people 15 to 24 years of age. In 2009, laboratories and providers reported a total of 43,816 cases of Chlamydia, 8,532 cases of gonorrhea and 1,595 cases of early syphilis in Los Angeles County<sup>1</sup>. In 2008, the Centers for Disease Control and Prevention ranked Los Angeles County number one in the number of reported Chlamydia and primary and secondary syphilis cases and number three in the number of reported gonorrhea cases, compared to all other county and city health jurisdictions in the nation<sup>2</sup>.

This report summarizes 2009 data on STD related visits, number of patients tested, and the prevalence of Chlamydia, gonorrhea, syphilis, and/or HIV in the Los Angeles County Department of Public Health's (LAC DPH) twelve STD clinics: Antelope Valley, Simms Mann Health & Wellness Center (formerly Yvonne Burke), Central, Hollywood-Wilshire, Monrovia, North Hollywood, Pomona, South, Ruth Temple, Torrance, Curtis Tucker, and Whittier Health Centers. Chlamydia was the most commonly diagnosed STD (11.3%), followed by gonorrhea (4.5%), HIV (0.8%) and early syphilis (0.6%).

**Sexually Transmitted Disease Prevalence in Public Health Centers, Los Angeles County, 2009**

### STD Visits and Number of Patients Tested

- In 2009, LAC DPH's STD clinics had nearly 46,000 STD related visits and tested over 29,000 patients for Chlamydia, gonorrhea, syphilis, and/or HIV.
- The number of STD related visits in 2009, increased from 44,289 in 2005 to 45,589, an increase of 2.9%.

<sup>1</sup> Los Angeles County Department of Public Health, Sexually Transmitted Disease Program. 2009 data. Excludes cases from Pasadena and Long Beach. Data is for all ages except where noted.

<sup>2</sup> Centers for Disease Control and Prevention. *Sexually Transmitted Disease Surveillance, 2008*. Atlanta, GA: U.S. Department of Health and Human Services; November 2009.

- The number of patients tested for Chlamydia, gonorrhea, syphilis, and/or HIV increased from 25,834 in 2005 to 29,002 in 2009, an increase of 12.3%.

### **Chlamydia**

- In 2009, a total of 27,980 Chlamydia tests were performed at LAC DPH's STD clinics, yielding 3,148 positive results, 11.3% prevalence.
- The number of Chlamydia tests increased from 24,560 in 2005 to 27,980 in 2009 an increase of 13.9%.
- The number of positive tests increased from 3002 in 2005 to 3148 in 2009, an increase of 4.8%.
- The prevalence of Chlamydia at LAC DPH's STD clinics decreased from 12.2% in 2005 to 11.3% in 2009, a decrease of 7.4%.

### **Gonorrhea**

- In 2009, a total of 28,073 gonorrhea tests were performed at LAC DPH's STD clinics, yielding 1,257 positive results, 4.5% prevalence.
- The number of gonorrhea tests increased from 24,780 in 2005 to 28,073 in 2009 an increase of 13.3%.
- The number of positive tests decreased from 1,786 in 2005 to 1,267 in 2009, a decrease of 2.9%.
- The prevalence of gonorrhea at LAC DPH's STD clinics decreased from 7.2% in 2005 to 4.5% in 2009, a decrease of 37.5%.

### **Early Syphilis**

- In 2009, a total of 25,973 syphilis tests were performed at LAC DPH's STD clinics, yielding 168 positive results for early syphilis, 0.6% prevalence.
- The number of syphilis tests increased from 22,410 in 2005 to 24,973 in 2009 an increase of 15.9%.
- The number of positive tests increased from 121 in 2005 to 168 in 2009, an increase of 38.8%.
- The prevalence of early syphilis at LAC DPH's STD clinics increased from 0.5% in 2005 to 0.6% in 2009, an increase of 16.7%.

### **HIV**

- In 2009, at LAC DPH's STD clinics, a total of 24,055 tests for HIV infection were performed, yielding 190 positive results, 0.8% prevalence.
- The number of HIV tests increased from 20,201 in 2005 to 24,055 in 2009 an increase of 19.1%.

- The number of positive tests for HIV increased from 145 in 2005 to 190 in 2009, an increase of 31.0%.
- The prevalence of HIV infection at LAC DPH's STD clinics increased from 0.7% in 2005 to 0.8% in 2009, an increase of 14.3%.

### **STD and HIV Co-morbidity**

- In 2009, at LAC DPH's STD clinics, a total of 29,002 patients who were tested for Chlamydia, gonorrhea, early syphilis and HIV on the same visit, 28 had both Chlamydia and HIV co-infection, 35 had both gonorrhea and HIV co-infection, 23 had both early syphilis and HIV co-infection, and 10 had all Chlamydia, gonorrhea, early syphilis and HIV co-infection.
- In 2009, at LAC DPH's STD clinics, among the 190 patients who test positive for HIV infection, the prevalence of Chlamydia was 14.7% , gonorrhea was 18.4%, early syphilis was 12.1% and 5.3% ad both Chlamydia and gonorrhea.

\*There was one test with unknown gender that was positive for HSV2

# **Sexually Transmitted Disease Clinic Morbidity Report, 2009**

XVII: Appendices

## **APPENDIX A: LABORATORY DIAGNOSTIC TESTS USED FOR THE DIAGNOSIS OF SEXUALLY TRANSMITTED DISEASES IN LAC STD CLINICS IN 2009**

All specimens sent from the Los Angeles County STD Clinics for gonorrhea, chlamydia, syphilis, herpes, and HIV were tested at the Department of Public Health, Public Health Laboratory.

### **Testing for *Neisseria gonorrhoeae* and *Chlamydia trachomatis***

*Chlamydia trachomatis* and *Neisseria gonorrhoeae* were detected from urine, endocervical, and rectal swabs using a nucleic acid amplification test (NAAT) Aptima Combo 2 Assay (Gen-Probe, Inc., San Diego, CA). The same test was also used to detect *Neisseria gonorrhoeae* from pharyngeal swabs.

### **Testing for syphilis**

Blood was screened for syphilis using the Rapid Plasma Reagin (RPR) test which is a nontreponemal assay. The RPR antigen detects reagin, a nonspecific antibody present in the serum of persons with syphilis. Positive RPR tests were followed by the treponemal, confirmatory Treponema pallidum-particle agglutination (TP-PA) assay. The TP-PA detects *Treponema pallidum* antibodies in the serum as an aid in the diagnosis of syphilis and provides useful epidemiological information.

### **Testing for HIV**

Until March 2008, blood was screened for antibody to HIV-1 using a first generation enzyme-linked immunosorbent assay (ELISA), Vironostika HIV-1 Microelisa System (Organon Teknika). In March 2008 the laboratory changed to use a more sensitive third generation test ADVIA Centaur XP, (Siemens Medical Solutions Diagnostics, East Walpole, MA). This is a chemiluminescent assay for HIV 1&2 plus GpO. Positive sera were confirmed using a Western Blot test (Genetic Systems Bio-Rad Laboratories).

### **Testing for Herpes**

Lesions/specimens were tested for Herpes Simplex Virus using real time polymerase chain reaction (PCR) (Real Art HSV 1/2 Light Cycler, Roche Diagnostics) that has been validated by the Public Health Laboratory for performance and/or conventional virus culture methods.

## APPENDIX B: DATA MANAGEMENT

### Data Management Methods

The Public Health Information System (PHIS) was used to examine all visits classified as “STD Clinical Visits.” The information collected from PHIS included demographic information such as gender, age, race/ethnicity, and marital status. In addition, PHIS information was used to determine the clinic visited as well as specific visit information such as the date of visit, tests conducted, and visit classification (i.e., “New” or “Return” visit). In addition, data from Quadramed was used for Antelope Valley Health Center because it does not use PHIS.

MISYS, the Public Health Laboratory database system was used to obtain laboratory results for chlamydia, gonorrhea, syphilis, and HIV. The laboratory results were merged with the PHIS/Quadramed data using the medical record number and the date of clinic visit/specimen collection. In addition, a definitive syphilis diagnosis for those with a positive confirmatory syphilis test, as well as treatment information for chlamydia, gonorrhea, and syphilis, was obtained using STD\*CASEWATCH. The final dataset contains one record for each patient, per visit to the STD clinic.

### Data Limitations

Possibility of multiple visits: If a patient sought care for the same event at multiple clinics, each visit was captured as a separate visit.

Definition of new visits: In order to account for multiple return visits for the same event, a separate analysis was conducted examining only visits classified as “New Visits.” The Department of Health Services’ “Procedures for Completing the Clinic Data/Patient Encounter Form” (Policy No. 301) specifies that:

- A “New Visit” is one in which a person is seeking service for the first time, or for a new episode, in an established clinic in the facility. Examples include a first time visit to a STD clinic; or a visit for a new episode, if the patient was previously treated adequately.
- A “Return Visit” is one in which a patient has a follow-up visit to a clinic or ancillary service in the facility for further evaluation, treatment, or results.
